The present sequence is a novel fluorescent protein (nPP) encoded by the full-length cDNA drPP583. drPP583 was isolated from Discosoma sp. "red", a non-bioluminescent species of the Class Anthozoa. Pluorescent proteins can be used in fluorescent labeling, a useful tool for marking a protein, cell or organism of interest. Unlike other markers used in protein labeling, such as beta-galactosidase and luciferase, fluorescent proteins do not require an exogenous cofactor or substrate. Methods involving fluorescent proteins are also less laborious and less difficult to control than the traditional methods of fluorescent labeling, where a protein of interest is purified and then covalently conjugated to a fluorophore derivative. Novel fluorescent proteins isolated from species of the Class Anthozoa can be used as markers for gene expression and protein localization studies, and in fluorescence resonance energy
                                                                                                                                                                                                                                                                                                                   Novel fluorescent protein from non-bioluminescent useful for fluorescent labeling and as markers.
                                                                                                                                                                                                                                                                              Claim
                                                                                                                                                                                                                                                                                                                                                                                WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                     Lukyanoy

The present sequence is Discosoma sp. red fluorescent protein drFP583. It was isolated using the Aequoria victoria green fluorescent protein (GFP) sequence, which was used to design PCR primers which might isolate other fluorescent proteins from a number of species of Anthozoa. These were Anemonia majano, Clavularia sp., Zoanthus sp., Discosoma sp. and Anemonia sulcata. The cDNA obtained was then screened in the search for sequences encoding fluorescent proteins. The other proteins found in this manner were cFP484, zFP506, zFP538, amFP486, dsFP483, asFP600, dgFP512 and dmFP592. These proteins can be used as fluorescent labels (for gene expression and protein localisation studies and in fluorescence resonance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            transfer (FRET) reactions. They may have improved properties and better suitability for larger excitations compared to prior art fluorescent proteins such as green fluorescent proteins such as green fluorescent protein. The invention provides a nucleic acid encoding functional red fluorescent CC protein (II) that differs from the sequence of an Anthozoan red fluorescent protein by at least one amino acid substitution, and with different fluorescent properties. The red fluorescent protein of the invention can be expressed by standard recombinant methodology. (II) are used a fluorescent markers and FRET partners. It is used for identifying protein-protein interactions. (II) is also suitable for multiplexed fluorescent analysis and FRET-based applications using existing Aequorea fluorescent proteins. (II) has improved brightness, reduced spectral cross talk, and is rapidly and efficiently expressed in mammalian cells. The key mutations in the encoding nucleic acids provide improved folding,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               energy transfer (FRET) studies) in place of fluorophore derivatives and luciferases, as these involve laborious processes and the latter require cofactors. They can also be used in place of GFP, which is too stable to be useful when studying short-term or repetitive events
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 225 AA
                                                                                                                                                                                                                                                                                                                                                                                                                   Proteins for Fluorescence Resonance Energy Transfer (FRET) comprise functional red fluorescent proteins, and the encoding nucleic acids, key mutations for improving the proteins function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fluorescent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Anthozoan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    30-NOV-2001

The present sequ represents an anthozoan fluorescent protein
The invention relates to DNA (I) containing either sequence ABA95905 or sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (yRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
The invention relates to nucleic acid molecules encoding non-aggregating chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are useful in analyte detection assays, as colouring agents, as markers in recombinant DNA applications, as sunscreens or filters, in fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in screening assays, as second messenger detectors, in fluorescence activated cell sorting applications,

N-PSDB;
The invention relates to a fluorescent timer protein having an emission spectrum that changes over time after synthesis from a first wavelength to a second wavelength. The fluorescent timer proteins are useful in monitoring the activity of a promoter, determining the age of a protein, identifying an agent that modulates the activity of a promoter and in enriching a population of cells comprising a fluorescent timer protein. The fluorescent timer proteins are also useful for assessing gene expression during development of a multicellular organism or during
                                                                                                                                                                                                                                                                                                            New fluorescent timer proteins comprising an emission spectrum that changes over time from a first wavelength to a second wavelength, useful for monitoring intracellular protein movement, translocation, trafficking

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC cellular differentiation, in response to a drug or other inducer of components activity, as a reporter to serve as a read-out of promoter activity, monitoring intracellular protein movement or translocation, component translocation, component translocation, or protein stability, to investigate temporal components of the activity of a regulatory element, for determining cell components and organ remodelling, in spatial and temporal components and activity of a regulatory element, for determining cell components and activity and temporal components. The fluorescent components in groteins and actually extracellular matrix components. The fluorescent components are employed, as detectable labels, as selectable markers, as biosensors in prokaryotic and enkaryotic cells, in protease cleavage components in prokaryotic and enkaryotic cells, in protease cleavage components in cell lines. The present sequence is Discosoma sp. condifications in cell lines. The present sequence is Discosoma sp. components or animals or site-specific gene condifications in cell lines. The present sequence is Discosoma sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

The modified yeast strain is used to detect environmental pollution, especially genotoxic and/or cytotoxic substances in complex environmental contaminants, especially organic compounds, but also (non-)ionising radiation and chemical carcinogens. Particular applications are in monitoring (waste) water (e.g. as an early warning system), medical toxicology screening and for industrial process control. The present sequence is a marker protein suitable for use in the cassettes of the present present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 225 AA;
New non-oligomerizing fluorescent protein containing at least one mutation that reduces or eliminates the ability of the protein to oligomerize, useful for making better and new assays for molecula:
                                                                                                                                                                                                                                                                                                                                                                          Discosoma sp.

Specifically, it refers to the presence of at least one mutation in the fluorescent protein that reduces or eliminates the ability of the protein to oligomerize. The present invention describes fluorescent proteins derived from naturally occurring green or red fluorescent proteins and provides a fusion protein that comprises a non-oligomerizing fluorescent protein linked to at least one protein of interest. As such, these fusion proteins can be used in methods and compositions to determine the pH of a sample, or whether the sample contains an enzyme, molecule or agent that regulates the activity of an expression control sequence. Furthermore, they may be used to identify a specific interaction of molecules, such that they are useful for improving or developing new assays in the field of molecular biology. This polypeptide sequence is the Discosoma sp. wild type red fluorescent protein (RFP) of the invention.
 Novel chimeric phosphorylation indicators, useful for detecting

The phosphorylation indicators of the invention are useful for detecting kinases or phosphatases in a biological sample. They are also useful high throughput analysis e.g. for detecting a kinase inhibitor or phosphatase inhibitor. The present sequence is Discosoma species red fluorescent protein (RFP) used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               kinase/phosphatase in samples, has donor molecule, phosphorylatable domain, phosphoaminoacid binding domain, and acceptor molecule, in operative linkage.
                                                                                                                                                                                                                                                                                                                                                      Discosoma wild-type red fluorescent protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a polynucleotide sequence (I) encoding a CC Discosoma red fluorescent protein (DBRed) variant having a reduced CC cand/or AC interfaces of the wild-type DBRed sequence (SI) comprising 225 amino acids, given in the specification, where the substitutions result (I) reduced propensity of the DBRed variant to form tetramers. (I) is CC useful for detecting transcriptional activity by providing a host cells CC conatining a vector which comprises (I) operatively linked to an CC expression control sequence, and an unit to assay the variant fluorescent protein fluorescence, and assaying fluorescence of the variant fluorescent cC fluorescence is indicative of transcriptional activity. A polynucleotide CC constination or trafficking of a polypeptide of interest. A polypeptide cC case is useful as markers to identify the location and amount of a CC target protein produced, where the target protein so the marker is seeful as markers to identify the location and amount of a CC target protein produced, where the target protein so the marker, CC which detects events as the function of the movement to the marker, applications involving fluorescence each other, for making CC interaction of a molecule such as Ca2+, Zn2+, for identifying the presence of a molecule such as Ca2+, Zn2+, for identifying the presence of a first and second molecule, for determining whether a CC useful for identifying a region or condition that regulates the activity of an expression control sequence. This is the amino acid sequence of Discosoma wild-type red fluorescent protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a non-oligomerising fluorescent protein containing a mutation that reduces or eliminates its ability to oligomerise. The fluorescent protein gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction, enzymes, or sample pH. These are also used to identify agents or conditions that regulate expression of control sequences. The present sequence is Discosoma sp. red fluorescent protein (RFP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Fluorescent proteins containing a mutation that reduces or eliminates its ability to oligomerize which gives more reliable fluorescence resonance energy transfer results and are useful to detect molecule interaction,

A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPuv or Enhanced GFP (BGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Transformation of cells with a fusion protein of an orphan receptor protein with a fluorescent protein useful for identification of ligands to the orphan receptor.

CC different residues in the two types of proteins. Mutagenesis of the CC residues in these key positions in, for example, a fluorescent protein, CC to those found in a chromoprotein is therefore proposed to confer CC chromoprotein activity on the fluorescent protein mutant, with CC chromoproteins being able to be converted into fluorescent proteins in a CC similar manner. The invention also relates to expression constructs, CC vectors, host cells and host cell progeny comprising a nucleic acid of the invention; the recombinant production of an interconverted constructs, CC chromoprotein or fluorescent protein mutant; and antibodies specific for CC chromoprotein or fluorescent protein mutant; and antibodies specific for CC chromoprotein are useful in any application that employs a chromoprotein or fluorescent protein mutants having chromoprotein or clivity can useful as colouring agents in, for example, food CC compositions, pharmaceuticals, cosmetics and living organisms. Proteins CC with chromoprotein activity are also useful as labels in biological CC analyte detection assays, as selectable markers in recombinant DNA CC applications (e.g. the production of transgenic cells and organisms), and CC are also useful as sunscreens and selective filters. Chromoprotein CC ariants having fluorescent protein activity useful in fluorescence ce resonance energy transfer (FRET) applications, as biosensors in CC changes in multicellular reorganisation and migration, as second composition in biological membranes. Proteins with fluorescent protein composition in biological membranes. Proteins with fluorescent protein of proteins composition in biological membranes. Proteins with fluorescent protein of one of the protein composition in biological membranes. Proteins with fluorescent protein of one of the protein composition in biological membranes. Proteins with fluorescent protein composition in biological membranes. Proteins with fluorescent protein of one of the protein composition in biological membranes. Proteins with f
fluorescent colour to another (e.g., green to red) is concomitant with the ageing of the protein and is useful for determination of the activation or deactivation of gene expression. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (GFP)-like chromoproteins and fluorescent proteins exhibit some degree homology, there are certain positions (referred to as 148, 165, 167 and 203; numbering corresponds to GFP) that are occupied by noticeably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cnidarian species, and most preferably an Anthozoan species. invention is based on the finding that although green fluored
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to interconverted mutants of chromoproteins (CP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Fig 1; 56pp; English.

                     The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DsRed sequence, where the substitutions result in reduced propensity of the DsRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods
                                                                                                                                                                                                                                                                                New monomeric and dimeric Anthozoan fluorescent protein variants with reduced propensity to oligomerize, and encoding polynucleotides, usefi in molecular biology, e.g. in immunoassays or in tracking protein movement in cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    propensity for oligomerization, especially tetramerization. The protesmay be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed
The present invention relates to nucleic acid that encodes a rapidly maturing chromo or fluorescent mutant of a Chidarian chromo- or fluorescent protein or its mutant. The protein is useful in applications involving nucleic acid encoding a chromo- or fluorescent protein and is useful for producing a chromo and/or fluorescent protein which involves growing the cell, whereby the protein is expressed, and isolating the protein substantially free of other proteins. The protein is useful in applications involving chromo- or fluorescent protein and is useful as pocked the protein and is useful as protein substantially free of other proteins. The protein and is useful as applications involving chromo- or fluorescent protein and is useful as pocked protein and is useful as protein and is usefu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-JUL-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC useful for synthesizing related proteins. The chromoproteins are useful CC as coloring agents which are capable of imparting color or pigment to a CC particular composition of matter e.g., food compositions, pharmaceuticals, CC cosmetics, living organisms, e.g., animals and plants. The chromoproteins CC may also find use as labels in analyte detection assays, e.g. assays for Diological analytes of interest and as selectable markers in recombinant CC DNA applications, e.g. the production of transgenic cells and organisms. CC e.g. in fluorescence resonance energy transfer (FRET) applications, as colorence of the automated screening of arrays of cells expressing fluorescent crapbrications involving the automated screening of arrays of cells expressing fluorescent crapbrications by using microscopic imaging and electronic analysis, as cond messenger detectors, and in fluorescence activated cell sorting applications and as in vivo marker in animals. The fluorescent proteins calso find use in protease cleavage assays. The sproteins can also be used is assays to determine the phospholipid composition in biological common and as a fluorescent timer. The present sequence represents the wild-type DsRED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The binding ligand is useful for detecting the target molecule and is efficiently detects the target molecule. The present sequence is Discosoma sp. red fluorescent protein (RBD) used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel binding ligand with intrinsic fluorescence and comprising fluorescent protein having heterologous binding sites, useful for detecting target molecule.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method of developing a sensor cell, for determining the activity of a target gene in the cell, which comprises providing a homogeneous population of cells, where each of the cells comprises a signal transduction detection system and introducing into the population of cells an isolated DNA construct comprising a promoter operatively linked to a targeting sequence. The method is useful in developing a sensor cell for determining the activity of a target gene in the cell. The sensor cell and the methods are useful in developing new and therapeutic drugs directed to the targets. The present sequence is a polypeptide shown in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Developing a sensor cell, useful in determining the activity of a targene and in developing therapeutic drugs, comprises providing cells comprising a signal transduction detection system and introducing DNA construct into cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             05-SEP-2002; 2002US-0408297P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel coding sequences (I) encoding green fluorescent proteins (II). The fluorescent protein coding sequences are isolated from an organism from phylum Arthropoda, from subclass Copepoda, or from family Pontellidae. The fluorescent protein coding sequences are useful for labelling biomolecules, cell, or cell organelles. They are also useful for identifying expression of a gene in a biological specimen or for generating transformants including transgenic organisms or site-specific gene modifications in cell lines. The present sequence was useful in high throughput screening assays. The present sequence was used in a sequence alignment with the green fluorescent proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid molecule encoding a fluorescent protein, usefi for labeling biomolecules, cell, or cell organelles, or for identifying expression of a gene in a biological specimen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            26-DEC-2002;

                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a chimeric phosphorylation indicator (CPI) (I) comprising in operative linkage, a first fluorescent protein, a CC phosphoaminoacid binding domain with an FHA2 sequence defined in the Specification, a protein kinase C (PKC)-phosphorylatable domain, and a CC second fluorescent protein. The first and second fluorescent proteins are CC chosen from green fluorescent proteins (GFPS) and red fluorescent consens (RPPS). The first and second fluorescent proteins are CC detectable resonance energy transfer, when the first fluorescent protein CC is excited. The PKC-phosphorylatable domain and phosphoaminoacid binding CC domain do not substantially emit light to excite the second fluorescent CC protein. (I) is useful for detecting a protein kinase C (PKC) or CC phosphates in a sample (such as biological sample e.g. cell, tissue CC sample, or their extracts). (I) is useful for detecting a kinase CC inhibitor or phosphatese inhibitor. The method of the invention is CC adapted to high throughput analysis. The current sequence represents the CC amino acid sequence of Discosoma DsRed RFP.

Essentially no fluorescent energy transfer occurs between (Ia) and (Ib). (I) is used for detecting and quantifying protease (or protease-inhibitory) activity in liquid samples or cells, particularly for screening-based optimisation (or generation) of biomolecules with proteolytic activity. (I) can be prepared in cellular or cell-free systems and makes possible intracellular analysis of protease activity. Preparation of (I) does not require regioseelective coupling of fluorophores to polypeptides and any selected protease cleavage site can be incorporated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 487 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New autofluorescent fusion protein, useful for determining protease and protease-inhibiting activity, comprises two different proteins linked by
